

Did You Know?

According to the MMDA's Metro Manila Accident Reporting and Analysis System, or MMARAS, more than 88,000 road accidents were recorded in Metro Manila in 2024 alone. That number represents thousands of drivers who potentially needed to go through the insurance claims process, highlighting just how important an efficient and user-friendly system is.

According to statistics from Myoona PH, a travel insurance company, in 2022, more than 20% of car insurance claims filed by private vehicle owners in Metro Manila alone were delayed, incomplete, or denied. Based on reports, most of these issues were caused by missing documents or late filing.

Meet InSure. InSure makes car insurance simple by bringing everything into one app.

The prototype consists of 4 main pages, which are the Home, Claims, Manual, and Profile.

The Home page serves as the main dashboard of the app, giving users a clear overview of their claims and submitted documents.

The Claims page organizes all claim records in one place, including both submitted and pending drafts. It is designed to simplify the claims process by centralizing all related information and documents, making them easier to manage.

The Manual page contains the policy guidelines and important insurance information. It is structured in organized sections for easier reading and includes an AI feature that helps users better understand the content.

The Profile page stores the user's personal and insurance details, including contact information, vehicle records, and provider information.
